

ABSTRACT OF THE DISCLOSURE**5 METHOD AND APPARATUS FOR ISOLATING FAILING HARDWARE IN A
 PCI RECOVERABLE ERROR**

10 A method, apparatus, and computer implemented
 instructions for isolating failing hardware in a data
 processing system. In response to detecting a recovery
 attempt from an error, an indication of the attempt is
 stored. A hardware component associated with the error
 is placed in an unavailable state in response to the
15 error exceeding a threshold for errors.
